

Scalability & Future Plan Template

Date	Team ID	Project Name	Max Marks
07 July 2026	*****	StudyAI – AI Powered Smart Study Companion	1 Mark

Scalability

Aspect	Details
Current Architecture	Single Flask development server with local file storage (uploads/ folder); no persistent database; frontend and backend run as separate local processes
Scalability Approach	Move to a WSGI production server (e.g., Gunicorn) behind a reverse proxy; replace local file storage with cloud storage (e.g., AWS S3) for uploaded files; introduce a database (PostgreSQL/MongoDB) for user accounts and material metadata instead of filesystem-only storage
Expected Growth/Load	Currently designed for single-user local testing; target next stage is a small multi-user beta (10–50 concurrent students) before considering full production scaling

Future Plan

S.No	Planned Feature/Enhancement	Target Timeline	Priority
1	Complete Flashcards module	Short-term (next 2–3 weeks)	High
2	Complete Quiz Generator module	Short-term (next 2–3 weeks)	High
3	Study Planner with revision scheduling	Medium-term (1–2 months)	Medium
4	User authentication + persistent database (replace local file storage)	Medium-term (1–2 months)	High
