

Project Executable Files & Execution Guide

Date	Team ID	Project Name	Max Marks
07 July 2026	*****	StudyAI – AI Powered Smart Study Companion	3 Marks

Step 1: Project Links & Access

Resource Type	URL / Access Link
Source Code Repository	<i>[Paste your GitHub repo URL here — you haven't shared one yet]</i>
Live Deployed Application	<i>[Paste your deployment URL once you deploy — you mentioned this is pending]</i>
Demo Video Link	<i>[Optional — record a short screen capture of Upload → Summary flow if time permits]</i>

Step 2: Key Executable Files & Folder Structure

S.No	Folder/File Name	Description & Purpose
1	/frontend/src/pages	Contains all React pages: Home, Upload, Summary, Flashcards, Quiz, Planner, Dashboard
2	/frontend/src/components	Reusable UI components: Navbar, Sidebar, DashboardCard
3	/frontend/src/services/api.js	Centralized API call handler connecting frontend to Flask backend
4	/backend/app.py	Main Flask entry point; registers blueprints for upload and summary routes
5	/backend/routes/upload_routes.py	Handles /upload POST endpoint — file validation and UUID-based storage
6	/backend/routes/summary_routes.py	Handles /summary POST endpoint — triggers text extraction and Groq summarization
7	/backend/services/pdf_service.py	Extracts text from uploaded PDFs using PyMuPDF
8	/backend/services/groq_service.py	Manages API calls to Groq (Llama model)

S.No	Folder/File Name	Description & Purpose
9	/backend/services/summary_service.py	Formats and returns the AI-generated summary
10	/backend/uploads/	Local storage folder for uploaded files (UUID-named)

Step 3: Local Setup & Execution Instructions

Step	Action / Terminal Command	Expected Outcome / Notes
1	git clone {repository_url}	Downloads the project to the local machine
2	cd backend && python -m venv venv && venv\Scripts\Activate.ps1	Creates and activates a Python virtual environment (Windows PowerShell)
3	pip install -r requirements.txt	Installs Flask, Flask-CORS, PyMuPDF, Groq SDK, and other backend dependencies
4	Create .env in /backend with GROQ_API_KEY=your_key_here	Loads your Groq API key securely at runtime
5	python app.py	Starts the Flask backend (default: http://127.0.0.1:5000)
6	cd ../frontend && npm install	Installs all React/Vite frontend dependencies
7	npm run dev	Launches the frontend dev server (Vite — typically http://localhost:5173, or next available port)
8	Open the frontend URL in browser	Upload a file on the Upload page, then view the generated summary on the Summary page
